The **Field Equipment Rental Portal** is a web-based application developed to simplify the process of locating and renting equipment for temporary use. Purchasing expensive machinery for occasional requirements may not be practical for individuals, farmers, contractors, or small businesses. A rental platform provides an alternative by allowing users to access the required equipment for a specific period without owning it. The proposed system acts as a centralized platform where users can explore different types of field equipment, view specifications, rental charges, and availability, and place rental requests based on their needs. Users can select suitable equipment and obtain the necessary rental information before submitting a request. Equipment owners or administrators can manage equipment listings, rental rates, availability schedules, customer details, and booking requests through the system. The portal maintains rental-related information electronically, making it easier to monitor bookings, equipment usage, and request status. It also reduces the need for manual record keeping and helps equipment owners keep track of their resources. Users can save time by finding and requesting equipment through a single online platform rather than contacting multiple providers. The main objective of the **Field Equipment Rental Portal** is to make equipment sharing and rental services more accessible, organized, and efficient. The system aims to reduce unnecessary purchasing costs, minimize manual administration, improve the utilization of available equipment, and provide a convenient rental experience for both equipment providers and customers.

MATCHED SOURCES

No matching sources were found on the public web at check time.

Results are indicative, not conclusive. We compare your text against publicly accessible web pages at the moment you run the check. We cannot detect matches in sources that are offline, paywalled, unindexed, or held in private databases (including academic submission archives). Common phrases, correctly quoted material, and coincidental wording can appear as matches. Use this report as a guide for review and citation - not as standalone proof that text was or was not plagiarized.
